PROJECT PLAN ELEMENTS

The goal of the Huber Real Estate Feasibility Study is to identify, evaluate, and select Best Management Practices (BMPs) capable of reducing the impact of pollutants from the nearby industrial, commercial, and residential areas, as well as public streets, railroads, and a recycling facility that floods into the sinkhole located at 701 East Seventh Street (as shown on Figure 1). The sinkhole drains to the Royal Spring Aquifer, which is the water supply source for nearby Georgetown, Kentucky. The study will identify potential projects to improve water quality and quantity draining into the sinkhole, the downstream Cane Run Watershed, and Royal Spring Aquifer.

Project Elements

A) **BMP Feasibility Study / Preliminary Design:** The Team will evaluate opportunities to implement stormwater BMPs on-site (as shown in *Figure 2*) and examine land uses on the property, drainage areas, potential sources of pollutants from those drainage areas, and the optimum BMPs to treat those pollutants. A preliminary design will be performed for the highest priority BMP(s) identified during the feasibility study.

B) **Trash Collection:** A trash collection system could be installed upstream of the sinkhole to capture floatable trash before it is conveyed into the downstream storm sewer system and Royal Spring Aquifer. Building on experience gained from a previously-completed feasibility study,

the 701 East Seventh Street feasibility study will complete a preliminary design of a similar system including:

- Geometry – conceptual sizing of trash collection booms, baskets, and access ramps for cleanout
- Location – the best location(s) of the proposed in-stream trash collection system based on land ownership, trash pollutant loading, future projects, or permitting considerations
- Maintenance Plan – which organization(s) will maintain the trash collection system and remove the trash, as well as where the trash will be taken for disposal

C) Educational Outreach: The project also includes a study of the feasibility of potential educational outreach programs.

1) EVALUATE THE APPLICABILITY OF STORMWATER BMPS FOR SITE LOCATION

2) PRELIMINARY DESIGN OF TRASH COLLECTION SYSTEM

3) FINAL FEASIBILITY REPORT

The results of the Feasibility Study will be presented in a final report that will include:

- a) A list of BMPs that are determined to be effective and suitable for installation at the property listed on Page 1 under “Project Site Location(s) & Property Owner(s).” They will be prioritized for implementation according to input from project collaborators, at a minimum.
- b) A Stormwater BMP Master Plan of the Huber Real Estate Feasibility Study will show proposed BMP locations, the area draining to all proposed BMPs that will be treated, and the discharge locations.
- c) The estimated pollutant removal effectiveness of all BMPs.
- d) Letter certifying all BMPs proposed for design are viable and feasible for the specific site and application.
- e) Design and construction cost estimates.
- f) Special design and construction conditions such as necessary permits, etc.; and land acquisition costs.
- g) The preliminary design and proposed maintenance plan for the trash collection system.
- h) A summary of the educational outreach programs that were evaluated.
