Lexington, KY

RE: METTLER TOLEDO Sole Source documentation

Dear Mr. Dean;

METTLER TOLEDO designed and developed all code associated with the AutoScale Weighing and Ticketing Software System the city uses. It was patented and licensed with a variety of modules, to accommodate your specific requirements. Each of these modules was available and serviced only through METTER TOLEDO. No other vendor has been given rights to use, sell or service our proprietary license.

Over the past few years, to meet your requirements and those of other customers, METTLER TOLEDO has transitioned our newest AutoScale upgrade to our latest software version, DataBridge MS & ES. DataBridge will convert and integrate with all exiting Mettler Toledo hardware, software and your existing scale terminals, load cells and custom unattended units. No other vendor has the ability to integrate with your suite of METTLER TOLEDO products and services. This is a developing system unlike any other vendor could possibly provide the county, because of the seamless integration.

This is a Sole Source Acquisition with METTLER TOLEDO, LLC and the Waste Management division of the Lexington Fayette-Urban County Government. Should you need further documentation and/or have questions or concerns, please feel free to contact us at your earliest convenience.

Sincerely,

Brenda
