PROJECT PLAN ELEMENTS

The overall purpose of the Stormwater Best Management Practices (BMPs) Feasibility Study is to address eroding streambanks, restoring and enhancing riparian buffer areas, providing stormwater educational elements, and increasing the public's access to natural features along the tributary.

1. *Project Elements:*

The proposed *Feasibility Study* will study the problems listed above and consider the following *possible solutions*:

- a) *Trash Collection System:* A trash collection system could reduce the scattered floatable waste and debris that accumulates along the stream.
- b) *Failing Infrastructure Hard Armoring:* Hard armoring could be installed for eroding pedestrian bridges, headwalls, and spillways to reduce sediment input to the stream.

- c) *Naturalize Stream*: The removal or retrofit of various concrete structures could decrease barriers to fish migration and help naturalize the stream. Existing impoundments could be repurposed as stream channels with offline wetlands, allowing slow infiltration from existing green areas to the stream.
- d) *Reconnect Stream and Floodplain*: Excavation of floodplain in existing green areas to create oxbow-like riparian buffers for the stream. Allowing the stream to spread out during rain events could decrease energy and erosion in the stream, improving streambank stability and infrastructure longevity.
- e) *Enhance Riparian Buffer*: The replacement of mowed grass and invasive species with the riparian buffer zones surrounding the stream can decrease the spread of pollutants from adjacent impervious areas by acting as a filter while stabilizing slopes to decrease bank erosion.
- f) *Streambank Stabilization*: A properly re-established streambank with proper bank slopes that are protected with natural stone channel lining and native plant riparian buffer can help to prevent erosion and downstream sediment deposition.
- g) *Linear Utility Protection*: Eroded streambanks at linear utility crossings could be armored with natural stone channel lining to prevent further erosion and protect the utility.
- h) *Outreach and Education*: Informational signs can be installed showing improvements to stormwater infrastructure. An outdoor classroom could also be installed, allowing the public and other interest groups to have an accessible outdoor learning or meeting space. Community outreach efforts could be planned to provide education on the effects of stormwater BMPs on stormwater quantity and quality.

2. *Final Feasibility Report*

The results of the Feasibility Study will be presented in a final report that will evaluate the use of potential BMP(s), including:

- a) The proposed location of the BMPs.
- b) Conceptual designs of the proposed BMPs.
- c) Design and construction opinions of probable cost for each proposed BMP.
- d) Special design and construction conditions such as necessary permits, coordination with outside stakeholders, etc.

REPORTING REQUIREMENTS

In addition to the reporting requirements outlined in the Grant Award Agreement, the following special items are noted for this project:

- 1) Grantor shall be provided a minimum of three (3) hard copies of the Final Feasibility Report along with one (1) digital copy.
